SUMMARY

Senior developer with 15+ years of experience across the full system lifecycle: requirements, databases, backend, frontend, infrastructure and security. Builds self-owned digital products from scratch and modernizes critical legacy systems.

PROFESSIONAL EXPERIENCE

ProcessMind

Since August 2011 (15+ years) — the only company in his professional career.
Internet Systems Analyst — Mid-level Developer — Senior Systems Developer (current)

Information technology — process and corporate systems consulting.

- Development and support of frontend and backend applications
- Building and maintaining REST APIs, routes, authentication and integrations
- Development with JavaScript, Node.js, PHP, ColdFusion and Lucee
- Interfaces with HTML, CSS, JavaScript, Vue.js and Bootstrap
- Modeling, queries, stored procedures and integrations across Oracle, MySQL and MariaDB
- Requirements gathering and business rule analysis
- Fixing and evolving legacy systems
- Working with physical servers, Windows/Linux environments, AWS and Docker

Key achievement: Identified and fixed vulnerabilities in more than ten registrocivil.org.br APIs, including dependency updates, code review and security hardening.

PERSONAL PROJECTS

AtendePix

A mini SaaS for small businesses to turn inbound conversations into customers, quotes, Pix charges and financial control. Built alone, from scratch to production.

3D&T Online

A web companion tool for the 3D&T Alpha tabletop RPG — character sheets, rulebook catalogs and AI-driven narrative adventures. Finished and in production.

Sakkamusuko

A web game about training, collecting and evolving fictional football athletes, including a custom match simulation engine. MVP complete.

EDUCATION

Information Systems Technology — Universidade Paulista (not completed).

SKILLS

Frontend: JavaScript, Vue.js, React, HTML, CSS, Tailwind CSS
Backend: Node.js, NestJS, Express, PHP, ColdFusion, Lucee, REST APIs
Databases: Oracle, MySQL, MariaDB, PostgreSQL (Prisma), MongoDB, Redis
Infrastructure and cloud: Physical servers, Windows, Linux, AWS, Google Cloud Run, Firebase Hosting, Docker
Security: Vulnerability remediation, JWT, Google OAuth, Rate limiting, Sensitive action auditing
Product and requirements: Requirements gathering, Business rule analysis, Solution design, Technical documentation
AI tools applied to development: Claude (Claude Code), Codex, ChatGPT

Testing and quality: Vitest, Playwright, ESLint, Prettier
